I am a dedicated and detail-oriented developer with a background in technical services and a diploma in Full Stack Web Development from Code Institute (graduated with Merit). Through my projects, I have gained hands-on experience in both frontend and backend development using HTML, CSS, JavaScript, Python, Django, and Flask.

My years as a service technician have given me strong problem-solving skills, precision, and the ability to work effectively under pressure. I enjoy combining technical logic with creativity to build clean, reliable, and user-friendly solutions.

I thrive in collaborative environments where I can learn, contribute, and help create meaningful digital products. I am now looking for an opportunity to grow as a developer and bring both my technical expertise and practical experience to a forward-thinking team.

Thank you for considering my application — I look forward to the possibility of contributing to your company's success.

Best regards,
 **Shan Hussein Elali**
