COVER LETTER

I am a full-stack developer with a background in technical services and a Diploma in Full Stack Web Development from Code Institute, where I graduated with Merit. My development work now extends well beyond course projects: I design, build and maintain full-stack applications across backend, frontend, APIs, integrations and deployment.

My main current project is AI Assistant, a production-oriented SaaS platform for individuals and small businesses to create specialized AI assistants. I have developed the product with Python and Django, PostgreSQL, JavaScript and REST APIs, and implemented AI integration, a Knowledge Base / RAG system, multilingual conversations, analytics, Stripe subscription flows, a website widget and public chatbot, Discord functionality and API access. I have also developed the Android client with React Native and Expo, which is currently progressing through Google Play testing.

Building the platform has given me hands-on experience working across an entire product lifecycle: turning requirements into features, connecting external services, designing user flows, testing regressions, deploying updates and maintaining a live application. I value clean, practical solutions and enjoy understanding how the different parts of a system work together.

Before moving into software development, I spent many years in technical and service roles. That background has given me strong troubleshooting skills, attention to detail, responsibility and experience solving real problems under time pressure. I bring that same practical approach to software development and am comfortable learning new systems and technologies when a project requires it.

I am looking for an opportunity where I can continue developing as a full-stack developer while contributing practical experience, curiosity and a strong problem-solving mindset to a development team. I would welcome the opportunity to discuss how my background and current development experience could contribute to your organization.

Best regards,

Hussein Elali
